

About

What is Rejuran I?

The Rejuran I contains polynucleotide (PN) that reduces crow's feet and fine wrinkles around eyes. It also effectively improves the elasticity around eyes area (thin skin).

How is Rejuran I different from Rejuran Healer?

Rejuran I and Rejuran Healer are both made of polynucleotides (PN), which promotes skin cell growth through inducing fibroblast and collagen production. The difference is that **Rejuran I is less viscous in texture than Rejuran Healer**, therefore, it can be safely used for the delicate skin around your eyes

without causing lumpiness. Additionally, the under-eye area is extremely complex and consists of important nerves, arteries and ligaments. Rejuran I is specially designed for the under eyes area and comes with a 34G nano needle to reduce the risk of swelling and infection.

How does Rejuran I work?

As we age, we lose collagen and elastin in our skin. Starting at age 25 onwards, the collagen production starts to decline by 1-3% each year. Skin around the eyes area will be affected very early on as it is thinner than the rest of the face. Wrinkles around the eyes, well-known as “crow’s feet” and fine lines start to become visible then. Additionally, with the loss of collagen, the blood vessels under the lower eyelid region become more obvious causing the appearance of “dark eye circles”.

Rejuran I **promotes tissue restoration, reconstruction** and improvement of physical appearance. Optimized for crow’s feet and thinned skin, it greatly improves the elasticity of the skin and effectively lightens fine lines under the eyes. At the same time Rejuran I helps plump up sagging skin, and **stimulates collagen production** around the eye area for brighter and more youthful eyes.

What are the benefits of Rejuran I Eye treatment?

- **Reducing wrinkles and fine lines**

Significant improvements of wrinkles were seen after injecting Rejuran® for a total of 4 times at two weeks interval.

- **Improvement of crow’s feet**

In clinical trials, patients received Rejuran® treatment for crow’s feet on both eyes every 2 weeks for a total of 4 times. Results showed significant improvement of wrinkles from 94.29% of patients. [2nd week 2.13, 4th week 2.20, 12th week 1.84 for LCL scale).

- **Improvement of dark eye circle appearance**

With increased production of collagen, the skin under the eyes will visibly thicken. The appearance of dark eye circle will show significant improvement after a minimum of 3 Rejuran® injections.

What should I look out for when doing a Rejuran treatment?

1. Always do a thorough research before committing. There are fake rejuran products circulating in the market which may do even more harm than good. Hence, if a deal is too good to be true, it usually is.
2. Just like fillers, there are certain skills required for the injection of rejuran. The skills of the doctor is very important - the product has to be placed within a specific area of the skin tissue to produce optimal results.
3. Rejuran treatment is very commonly combined with other modalities (i.e. laser treatments) to produce optimal results. Deciding on the right treatment combination requires a “good eye” and “skills” by the doctor administering the product and treatment.

How much Rejuran I do I need for each treatment?

This will be assessed by the doctor upon consultation or even during the treatment. Unlike Rejuran Healer that contains 2ml in each syringe, Rejuran S and Rejuran I only contains 1 ml per syringe. Depending on the severity of the condition, some patients may require 1-2 syringes for each treatment.

How many times do I have to do this treatment?

Similar to Rejuran Healer, we recommend a minimum of 3 to 4 treatment sessions at the start, with a space of 2-4 weeks between each sessions. There are a number of patients who may require more than 3 sessions at the beginning. The doctor will usually assess your condition and concerns prior to the treatment or even during the course of the treatment as results for each patient may vary.
