

### **What is Thermage FLX™?**

Thermage FLX is the 4<sup>th</sup> generation treatment that helps tightens skin to reduce the appearance of fine lines and wrinkles through non-invasive methods. It works by using patented Mono-polar Capacitive Radiofrequency technology to create a uniform heating effect in the deep, collagen-rich layers of the skin. This gentle heating tightens and remodels existing collagen matrix and concurrently stimulates the production of new collagen, resulting in an immediate lifting effect. A well-defined three-dimensional skin contour can be achieved - all with little-to-no downtime!

### **What are the differences between the new generation Thermage FLX and Thermage CPT?**

Just like its predecessor, the 4th generation Thermage FLX device also uses radiofrequency technology to target collagen-rich layers of the skin. It builds on the benefits of the prior generation Thermage CPT for improved performance.

Thermage FLX features AccuREP technology that automatically tunes each pulse of energy for an even **more precise and consistent treatment**, suited to your skin.

It also integrates the Comfort Pulse Technology™ (CPT) with multidirectional vibration and interspersed cooling to offer a **more comfortable** experience.

The New Total Tip 4.0 has a larger tip and can reach a bigger surface area, thus it is able to **speed up treatment by up to 25%**.

*In short, Thermage FLX delivers faster, more precise and consistent treatments with enhanced comfort.*

## 3 Major Advances of Thermage® FLX

### Total Tip 4.0 <NEW>

- Uses precise heating to address lines & wrinkles<sup>1,3,4</sup>
- Up to 25% faster treatment time<sup>5,8</sup>

### AccuREP™ Technology<sup>5</sup>

- Auto-tuning before each energy pulse is delivered to skin
- Optimizes the amount of energy delivered to skin for precise heating and treatment

### Enhance Comfort in Treatment

- Multi-directional vibration enhances comfort for body and face<sup>6</sup>
- Vibration enhancement in the body tip for effective and comfortable body treatment<sup>7</sup>

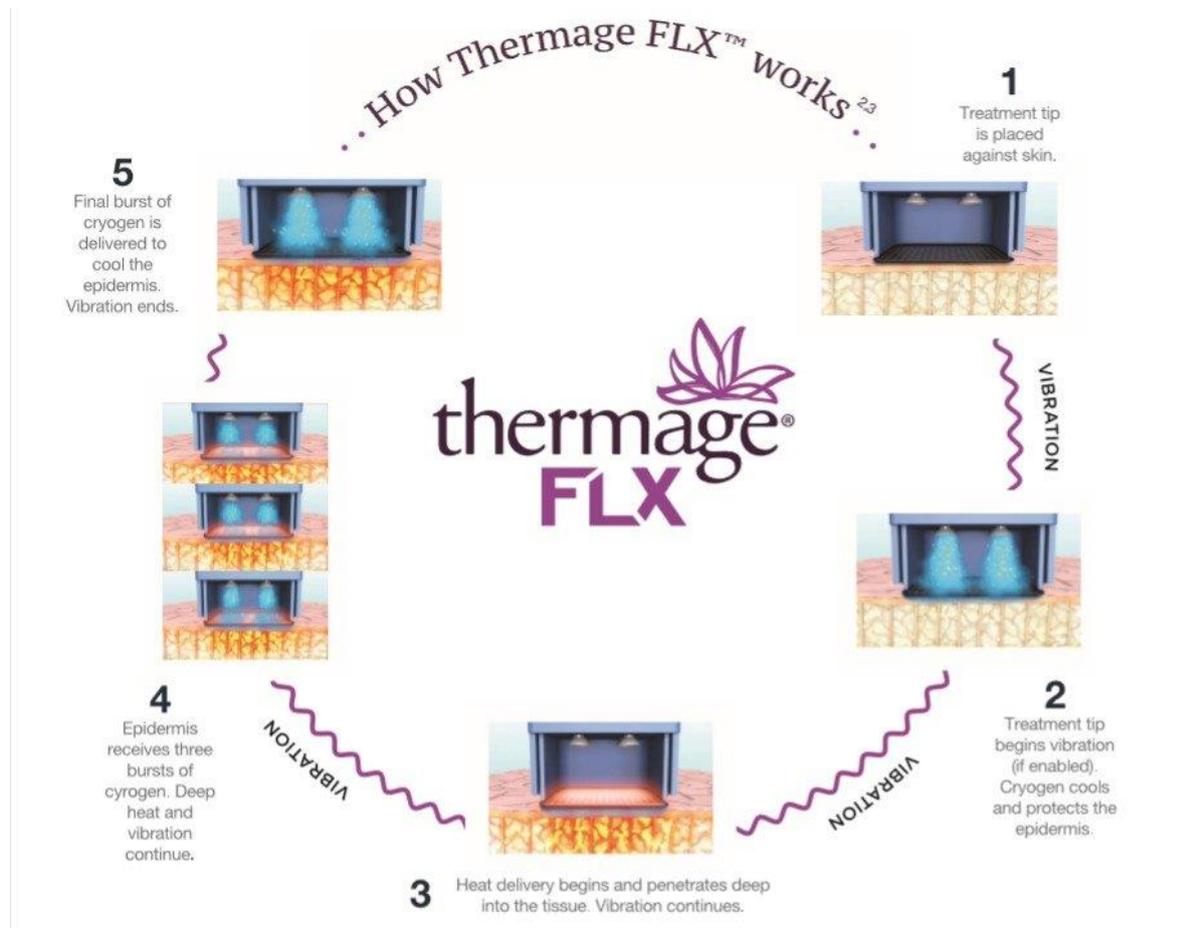

### Total Tip 4.0

Personalized tightening and lifting

## How does Thermage FLX work?

As we age, collagen in our skin breaks down, which leads to the formation of fine lines, wrinkles, skin sagging and loosening. Thermage FLX™ treatment uses radiofrequency technology to heat the deeper, collagen-rich layers of the skin. This causes existing collagen matrix to contract and encourages new collagen to start regenerating. Visible tightening results can be seen immediately, and will continue to improve over the next 4-6 months.

## What kind of results can I expect with Thermage FLX?

The results of collagen tightening include:

- Smoother and tighter skin with less sagging
- Overall younger looking appearance
- More defined jawline and chin contour
- Softened wrinkles and fine lines around mouth, eyes, forehead and knees
- Tightened skin around neck, arms and buttocks
- Preventive benefit - delays aging and the onset of wrinkles

**Thermage FLX can treat the following areas:**

**How soon will I see results? How long will the results last?**

After the treatment, the results will continue to improve in the first 6 months and its effects can last up to 12 months according to clinical research studies. The results are subjected to individual skin condition, age, genetics, lifestyle and diet.

**Is the treatment painful?**

The treatment is relatively comfortable. Patients may feel a brief heating sensation when the treatment device's tip touches the skin, followed by a cooling sensation to minimize any discomfort.

**Does the treatment have any downtime?**

Some patients experience slight redness or minor swelling after the treatment which typically subsides in 24 hours. Thermage FLX is a non-invasive treatment with no downtime - patients can usually get back to their normal daily routine immediately after treatment.
