

How Does it Work?

Injectable smoothers are highly purified proteins with the ability to (temporarily) block the nerve cells that cause muscle contraction, essentially paralyzing the muscles. As a result, the injected muscles can no longer contract, causing facial wrinkles and lines to relax and soften.

This treatment also blocks the release of the neurotransmitter that stimulates the sweat glands, making it an effective hyperhidrosis treatment. By inhibiting the activity of the sweat glands, it can then be used as a treatment for sweaty palms, as well as a treatment for hyperhidrosis of the underarms.

Benefits

The procedure is quick and relatively painless. It is also highly customisable and can be tailored to a patient's needs, whether it's for anti-ageing purposes or medical reasons like hyperhidrosis. Additionally, visible results are observed within a few days of the injections.

This treatment is a non-surgical one, which means that there is little to no downtime. Patients can resume their day-to-day activities after the procedure.

Safety & Side Effects

Injectable smoothers are administered just below the skin's surface using very fine needles. Although it is a relatively short and painless procedure, a numbing cream may be applied to the treatment area to ensure a comfortable treatment process. There may be some bruising at the injection site, but this subsides after a few hours.

Patients will usually notice improvement within 2-3 days after the treatment. The effects are temporary, and will typically last around 4 to 6 months.

*At Privé Clinic, the treatment is conducted by a certified doctor.

Treatment Areas

- Calf muscles- It decreases the size of the lower leg without reducing its performance
- Underarms - Hyperhidrosis underarm treatment

- Palms - Treatment for sweaty palms
- Other facial areas

For more information on calf muscle reduction and as a hyperhidrosis treatment for excessive sweat glands, visit Privé Clinic in Singapore or **contact** one of our friendly consultants.

Important note:

The Ministry of Health of Singapore does not allow the publishing of before and after photographs and patient testimonials in advertising materials. If you visit our clinics for more information, we will be happy to show you more photographs and pictures of our patients.
