

CoolSculpting by ZELTIQ

Have you been eating healthy meals and exercising regularly, but still have pockets of moderate amounts of stubborn fat? Then, CoolSculpting might be the perfect body-contouring treatment for you.

What is CoolSculpting?

CoolSculpting by Zeltiq is an FDA-cleared non-surgical body contouring and fat reduction treatment that uses controlled cooling to eliminate stubborn fat. The results are proven and will improve your look and confidence. Results of up to 20% have been observed.

This CoolSculpting treatment is based on the idea that cold can selectively affect fat cells. This patented procedure was developed by Harvard University scientists. It uses a targeted cooling process known as cryolipolysis, which kills and eliminates fat cells underneath the skin by freezing them. Only fat cells are targeted and frozen while skin cells are unharmed.

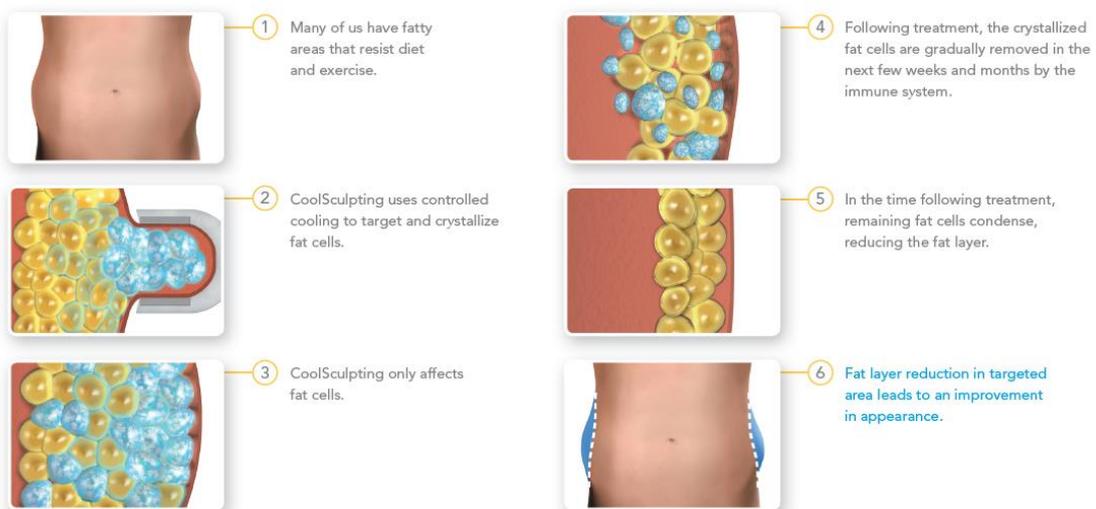

How it works

Many people have stubborn fat in certain areas and these do not disappear even though you exercise regularly and eat a proper diet.

CoolSculpting fat freezing treatment uses controlled cooling technology to target and crystallise fat cells, effectively freezing them. Rest assured that only fat cells are damaged, while the surface of the skin remains unharmed.

After the treatment, the damaged fat cells will be removed by the body's immune system in the following weeks and months. Then, the remaining fat cells will become condensed and the fat layer will be reduced. The reduction of the fat layer in the specific target areas will improve your overall appearance.

Benefits of CoolSculpting by Zeltiq

You can get results from this fat freezing treatment, without surgery and without anesthesia. This is a non-invasive and non-surgical treatment that incurs little or no downtime. You can return to your daily activities after your treatment.

New and Improved – CoolAdvantage and CoolMini

CoolAdvantage™ is the newest CoolSculpting™ applicator. It delivers 360° cooling technology at an even lower temperature than before, improving fat elimination and reducing treatment from 60 minutes to just under 35 minutes. CoolAdvantage™ also enhances patient's comfort level, and is able to treat more fat tissues per session due to a wider cooling area.

CoolMini™ is designed to eliminate the fat deposits under your jawline to reduce the appearance of double chin, and target smaller, hard to reach areas such as bra or armpit fat. This smaller applicator perfectly molds under the chin to contour the neck for a more defined and sharper jawline.

Side Effects & Safety

CoolSculpting technology safely delivers precisely controlled cooling to gently and effectively eliminate the fat cells in the target areas, while the skin on the surface is unharmed.

The controlled cooling devices of the CoolSculpting system are designed with built-in safety features. The system will automatically shut down if the sensors detect that the skin is getting too cold. With the patented Freeze Detect™ technology, Coolsculpting ensures protection during the treatment process.

To ensure your safety, thousands have undergone in-depth training and certification. CoolSculpting treatments are performed only under the supervision of a licensed professional to guarantee the highest standards of care.

Please be careful of imitations and counterfeit devices, because they do not have safety mechanisms and lack efficacy. Complications and skin necrosis may arise, and results, if any, can be inconsistent.

Call Us for a Consultation Today

During your consultation, a comprehensive and personalised treatment plan will be developed for you, in order to address your specific areas of concern. Multiple

treatments might be required. However, you can rest assured that this is a non-invasive and non-surgical procedure. No needles or hoses will be involved in your treatment.

However, please note that CoolSculpting by Zeltiq is not a weight loss treatment. Therefore, it is not a treatment for obesity. Moreover, it also does not replace the benefits of and regular exercise and a balanced diet.

To increase the benefits of your CoolSculpting fat freezing treatment, you should observe an exercise and healthy diet programme after undergoing treatment.

Important note:

Individual results may vary. The Ministry of Health of Singapore does not allow the publishing of before and after photographs and patient testimonials in advertising materials. If you visit our clinics for more information, we will be happy to show you more photographs and pictures of our patients.
