

## **Exilis Elite Facelift**

As we age, so does our skin. Skin tends to lose its shine and elasticity with age, and that's what makes us look old. Thankfully, that is no longer a problem in today's environment as it can be easily sorted out with advancements in medical technology.

### **What is Exilis Elite Facelift?**

The Exilis Elite Facelift is a non-invasive treatment approved by the Food and Drug Administration (FDA). Exilis Elite Facelift rejuvenates the skin of the face and promotes collagen growth, which will soften and smoothen wrinkles. Due to its unique outcome, it is often seen as the preferred choice to the traditional surgical facelift procedure.

### **How Does It Work?**

How does the Exilis Elite Facelift work? Well, Exilis Elite uses ultrasound technology and Radio Frequency (RF) that transmit energy to the deep tissue. When used on the treatment area, you will feel a warm sensation. This is because the Exilis Elite has the capability of reaching deep into the skin tissues while utilising an advanced cooling technique to protect the skin from experiencing further damage.

Unlike the traditional invasive facelift, the risks for this procedure are extremely low and will only cause redness for a few minutes. In other words, the recovery after Exilis treatment is brief and painless.

If you are considering the Exilis Elite Facelift, what then can you expect as a patient?

While undergoing this procedure, the skin's condition will be monitored constantly for a comfortable treatment. The transmitted heat can then rejuvenate saggy skin and smoothen wrinkles by promoting growth and production of collagen in the skin to improve its texture and elasticity. Once the new collagen is formed, loose skin will look younger and tighter.

### **A Multifaceted Treatment**

While Exilis Elite is mainly used on the face, it can actually be used on practically every part of the body, as scientifically proven. Most patients use Exilis Elite on areas such as the face, neck, abdomen and lower back, arms, decollete, hands, buttocks, bra roll, calf, ankle, thighs and knee. To ensure a successful outcome, the patient might need more than one session of Exilis Elite facelift treatment, but that is dependent on the treatment area and skin texture.

### **Safety & Side Effects**

Unlike the traditional invasive facelift, the risks for this procedure are extremely low and will only cause redness for few minutes. In other words, the recovery after Exilis treatment is brief and painless. The patient can resume daily work straight after the procedure.

### **Important note:**

The Ministry of Health of Singapore does not allow the publishing of before and after photographs and patient testimonials in advertising materials. If you visit our clinics for more information, we will be happy to show you more photographs and pictures of our patients.
