

## **Liposonix+**

The FDA-approved Liposonix+ is a non-surgical treatment that utilises high-intensity focused ultrasound (HIFU) to create a powerful heat effect used to destroy targeted and unwanted fats without damaging the tissues of non-targeted areas.

Treatments with Liposonix+ are customisable to pinpoint specific spots with the capability to work across a large treatment area in just one single session. Its extreme flexibility enables accurate control over the treatment area, with the ability to control where the energy is delivered.

Liposonix+ treatments have been proven to be effective and powerful in just a single one-hour session and are a great alternative to the traditional liposuction.

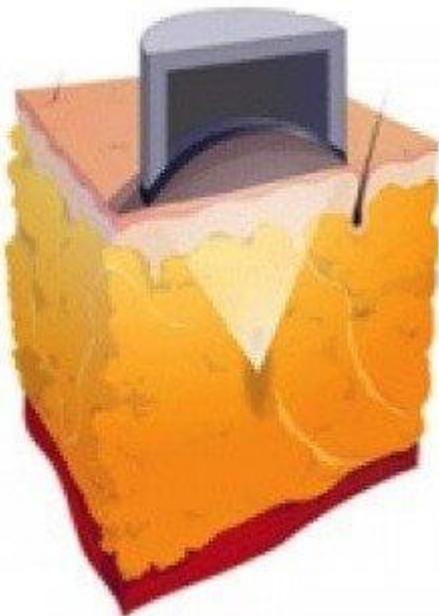

## **High Intensity Focused Ultrasound (HIFU) treatment**

This treatment utilises high-intensity focused ultrasound or HIFU energy to reduce one's waistline without the need for surgery. As the device is placed on the patient's targeted area, the skin will not be harmed, and only the fats beneath the skin will be permanently destroyed. The body will then remove the treated fat naturally, which leaves you with a thinner and more contoured body.

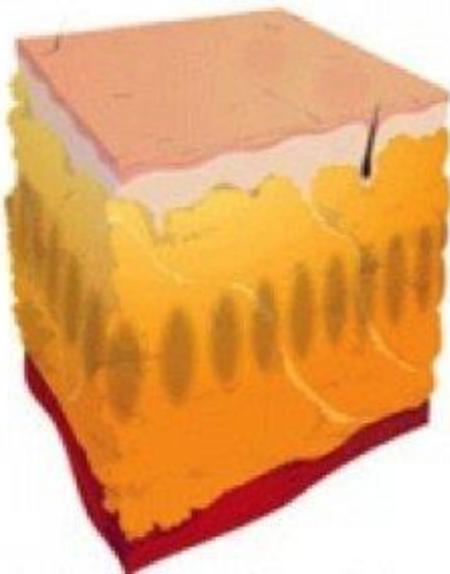

Other ultrasound body sculpting technologies often utilise low-intensity, low-frequency or unfocused energy, which usually require numerous treatments and more often than not, can lead to undesirable results. However, the flexibility of the Liposonix+ system allows accurate control of high-intensity focused ultrasound energy to destroy targeted fat non-surgically while delivering consistent and desirable results.

If you desire an ideal body shape, then Liposonix+ might be the right choice for you. This groundbreaking fat reduction treatment eliminates fat, giving you a slimmer, trimmer look by getting rid of love handles and abdominal fat. Results are normally seen in 8 to 12 weeks, which is similar to the time needed for your body to process the treated fat naturally.

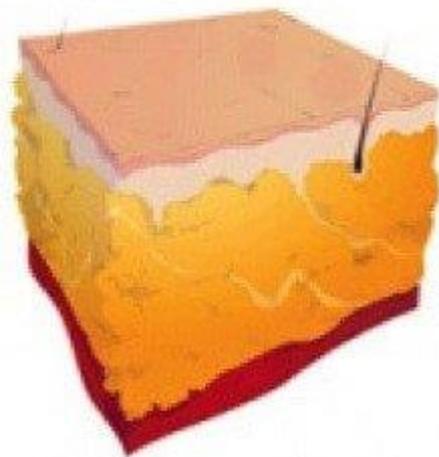

However, do bear in mind that Liposonix+ is not liposuction nor a replacement for a healthy lifestyle and exercise, or a way to lose weight quickly. It's a supportive treatment method to help you slim down and reduce that last bit of stubborn fat to reach your personal body targets.

1. High-intensity ultrasound energy is focused on the targeted fat.

2. Skin is not harmed as fat tissue beneath the skin is permanently destroyed.

3. The body naturally removes the treated fat, leaving you with a thinner waistline.

### **Benefits**

Liposonix+ the preferable choice for those who want to get rid of stubborn fat that won't budge without surgery. As it is non-invasive, the results will not be as dramatic as with liposuction. However, unlike liposuction, Liposonix+ does not result in uneven and lumpy skin. This treatment leaves behind smooth skin due to its advanced scanning delivery technology.

### **Safety & Side Effects**

Fat reduction surgical procedures such as liposuction usually come with risks and are often associated with post-treatment recovery downtime. As it is a non-surgical procedure, no anaesthesia or incisions are involved, minimising the recovery period. Thus, the Liposonix+ has very little to no downtime, enabling the patient to resume normal activities almost immediately after treatment. Furthermore, it is backed by more than a decade of research and tests.

### **Important note:**

The Ministry of Health of Singapore does not allow the publishing of before and after photographs and patient testimonials in advertising materials. If you visit our clinics for more information, we will be happy to show you more photographs and pictures of our patients.
